

## the basics:

eviid has been disrupting multiple sectors for some years now with technology that is completely changing the way in which we work. Eviid is currently bridging the visual gap within workflow and claims management, allowing individuals to be at the scene from their desktop, seeing what others see, capturing and recording data, which is all then evidentially 'bubble-wrapped' and securely stored for present and future reference.

eviid was created as enterprise-focused technology, with the above in mind, and has grown to be the market standard for digitalising workflow and the claims process, but 'one of a kind' in terms of the evidential validity of media files.

Smartphones are so widely available 'in pocket' for so many individuals these days, with 2.5 billion smartphone users worldwide (stats from statista.com), smart devices are the tool that most have to hand. Thus, we have created what is now patented technology leveraging this accessibility - safely, securely, and in compliance with all relevant regulation - could dramatically improve decision-making, documentation and compliance across multiple sectors.

## secure evidential video capture

see what your customer sees - live, recorded or both

Eviid currently comprises of a back-end management system and 4 means of use, tailored and progressing with ever-evolving enterprise demands:

- **Back-end system:**

- Fully configurable.
- Effectively manage all media files.
- Tamper-evident capability & full audit trail.
- Take control of the field.
- Multiple features such as report generation and bookmarking etc.

- **Eviid Professional:**

- The B2B 'Field Force' proposition.
- Be at the field from your desktop, making key decisions.
- Reduce the number of site visits.
- Effectively delegate work.
- Gather evidence of work undertaken & completed.
- Visually enable all field workers through the Eviid Pro app, with configurable access.

- **Eviid Assist:**

- The B2C visual enabling app.
- See what your customer sees.
- Send ADHOC access via SMS/Email.
- Download, log in with given access code, capture then send back to base.
- Review claims from base without need for site visits.
- Obtain objective media evidence.
- All claims are collated and stored within a back-end system for present and/or future review.

- **Eviid Live/Interview:**

- Create 2-way live calls with individuals to see what they're seeing in real time and offer advice/guidance on the spot.
- Live-stream from mobile device to desktop.
- Live is featured on both Pro & Assist apps.

- **Eviid Uploader:**

- Upload media at any time to the eviid database via browser.
- Upload media from third-party devices such as Dashcam, GoPro, Drone etc.

platform-side features

audited adding & editing of bookmarks to video
