

enterprise-ready, evidential media technology:

eviid's patented technology has been transforming multiple sectors for some years now with technology that is completely changing the way in which we work. eviid is currently bridging the visual gap within workflow and the claims supply chain, allowing individuals to be at the scene from their desktop, seeing what others see, capturing and recording data, which is all then evidentially and securely stored for present and future reference.

eviid was created as enterprise-focused technology, with the above in mind, and has grown to be the market standard for digitalising workflow and the claims process, with propositions that fit along multiple verticals along the supply chain and collaborate with each other with ease.

Smartphones are so widely available 'in pocket' for so many individuals these days, with 2.5 billion smartphone users worldwide (stats from statista.com). Smart devices are the tool that most have to hand. Thus, we have created technology that not only leverages this accessibility, but also the upload from third party devices - safely, securely, and in compliance with all relevant regulation - which is guaranteed to dramatically improve decision-making, documentation, compliance, customer retention whilst reducing costs across the supply chain.

secure evidential video capture

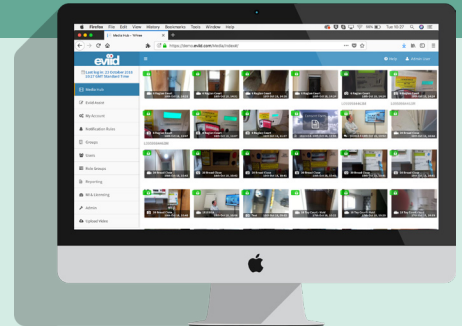

see what your customer sees - live, recorded or both

the eviid stack currently comprises of an enterprise-ready media hub & 5 front-end technology offerings, whitelabelled to each customer with ever-evolving features and functionality:

- **Global Enterprise-Ready Media Hub:**

- Fully configurable
- Effectively manage all media files from all platforms
- Tamper-evident validation
- GDPR compliant with full audit trail
- Take control of eviid's front-end suite
- Multiple features such as sharing, report export and bookmarking etc

- **eviid Professional:**

- The B2B 'Field Force' proposition
- Be at the field from your desktop, making key decisions
- Visually enable all field workers through the Eviid Pro app
- Live, Photo & Video capture
- Advanced Forms with features such as the scoping tool

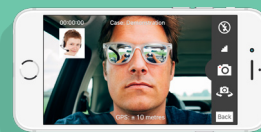

- **eviid Assist:**

- The B2C visual enabling 'self serve' app
- See what your customer sees
- Send ADHOC access via SMS/Email
- Download, log in with given access code, capture then send back to base
- Review claims from base without need for site visits
- Obtain objective media evidence
- All claims are collated and stored within a back-end system for present and/or future review

- **eviid Live/Interview:**

- Create 2-way live calls with individuals to see what they're seeing in real time and offer advice/guidance on the spot
- Conduct face-to-face interviews remotely
- Live-stream from mobile device to desktop
- Live is featured on both Pro & Assist apps

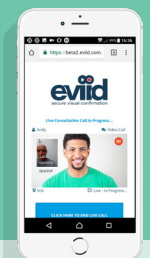

- **eviid Uploader:**

- Upload media at any time to the eviid database via browser, whether smartphone or desktop
- Link sent via SMS or Email.
- Upload media from third-party devices such as Dashcam, CCTV, Drone etc.
- Unique 20-100 fold compression functionality means swift upload, access & sharing.

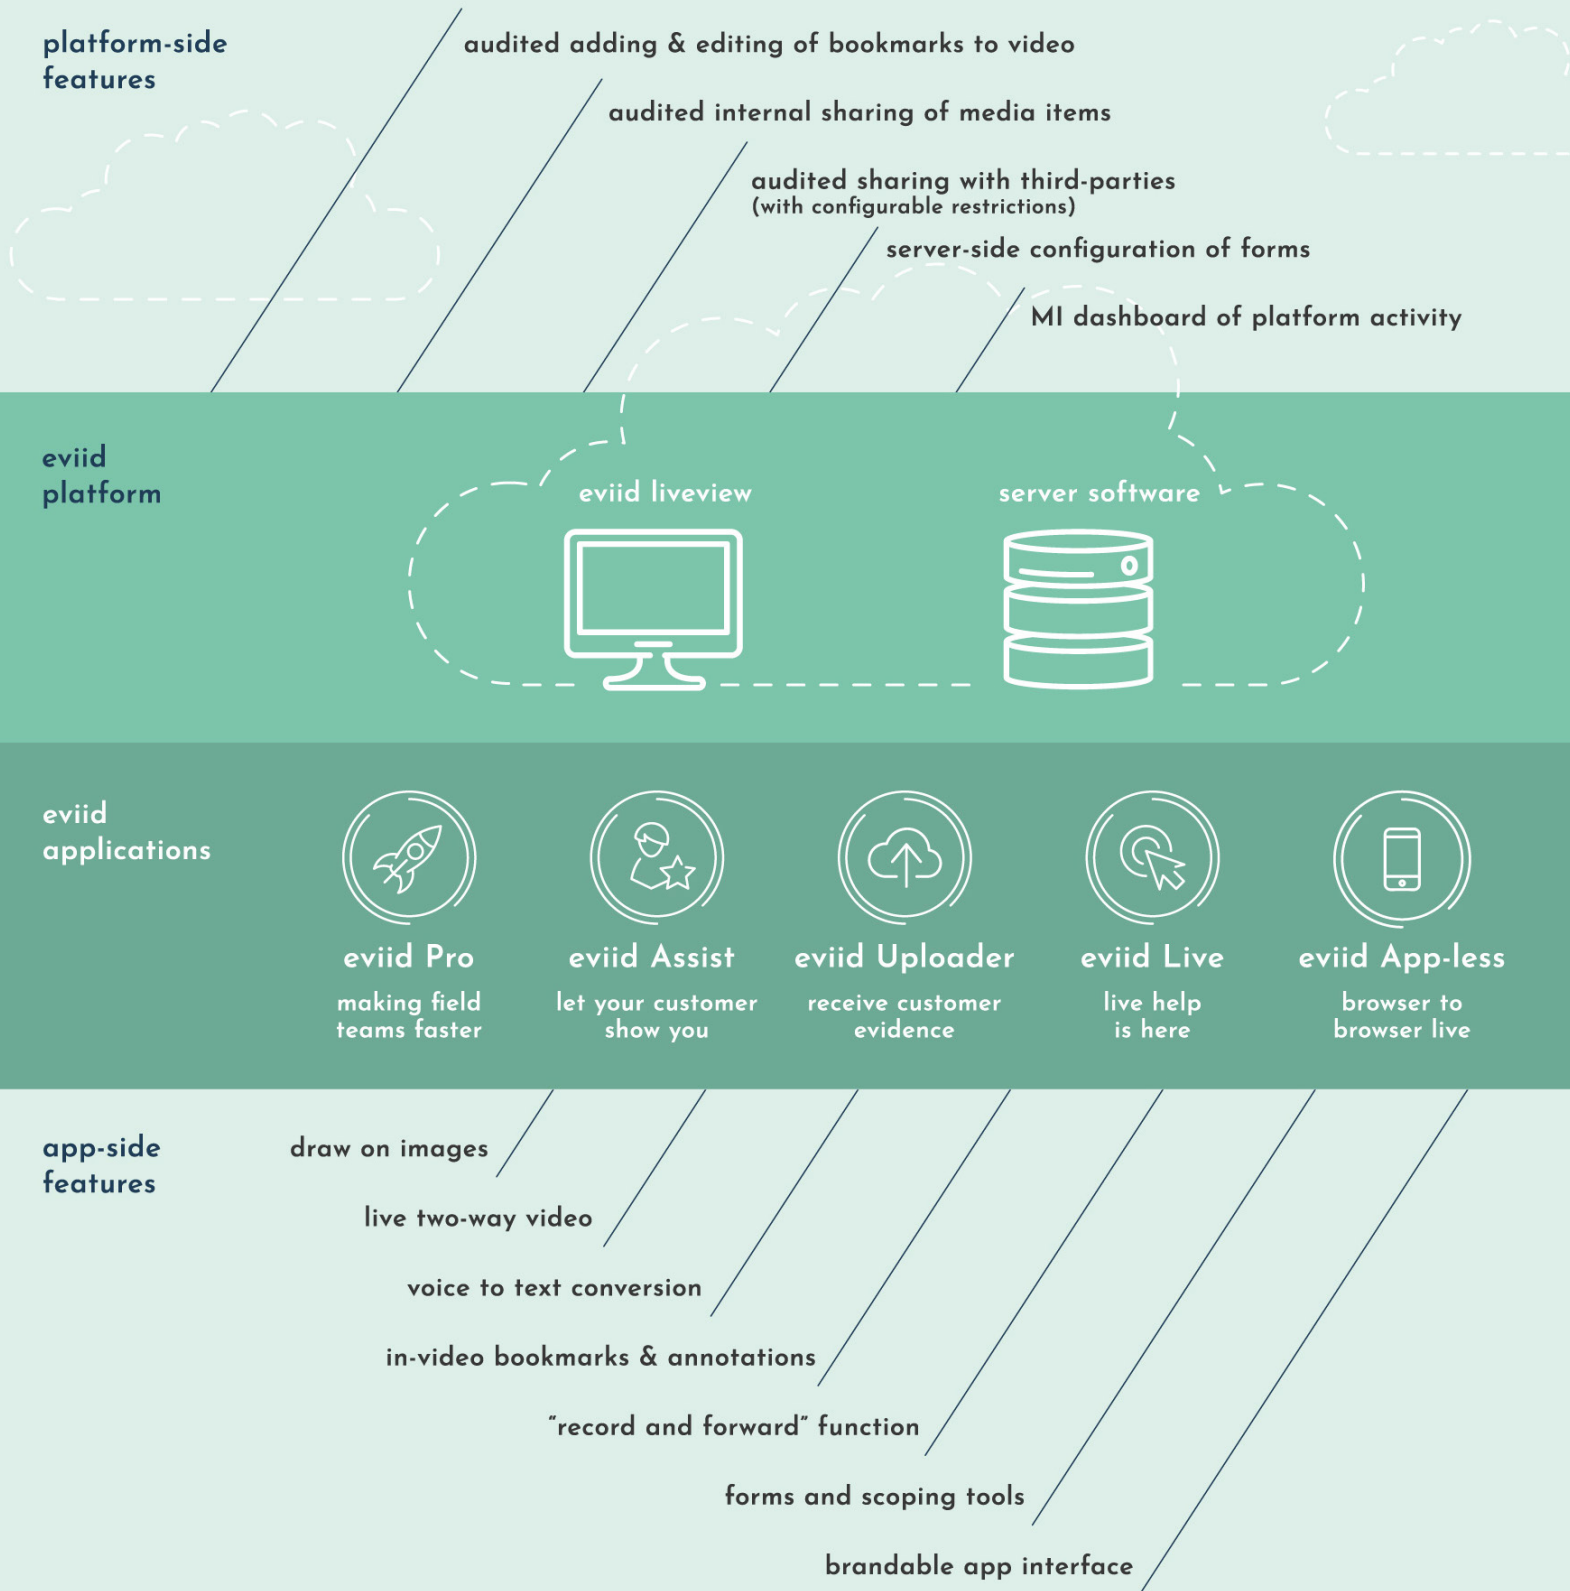

- **eviid App-less Live:**

- Browser to browser live stream
- Initiated via SMS or Email link
- A quick & easy process to conduct live interviews without the need to download an app.

from back-end to front-end; how does it work?
